Comments from the Editor and Reviewers :

Reviewer #4: 1. Introduction

- 1st paragraph in should have more References on climate change and it should be internationally.
- Table 1 should be removed and replace with map of study area.

2. Research Methods

- The Lemeshow formula should come with ref. to show that it suitable with the study and from my POV table 2 it not necessary just indicted that how much sample site in each study site from the formula
- In page 6 last paragraph: Why the model has only 6 factors (Are there any study somewhere shows the those 6 factors are important meanwhile other not important in the tobacco plantation). Again, there are lack of ref. to show the standard of the methodology which use in this study (I have wrote in the comment of references relevant and I may emphasize again) .

3. Result and Discussion

3.1 Results

- 1st paragraph about study site characters should move to Introduction or research method
